To whom it may concern,

This is a formal letter of recommendation for Wear-Concepts, and in particular the services offered and performed by Mr. Corey Boos and his associates.

Blue Circle Cement have been using the services of Mr. Boos and his crews for a number of years now, and they have to date been exemplary. Wear-Con has installed ceramic linings in our cyclones and coal mill transport lines. We have been using their chromium carbide overlay plate with great success in chutes and ductwork that have traditionally been associated with high wear.

We have found Corey and his direct employees (as well as his sub-contractors) to be professional and extremely flexible while on site. This is very important to us, as often we are not fully aware of what we are going to find in the way of wear areas within the equipment until our annual outages occur and the equipment is disassembled.

We have found the hourly rates of the craftsmen associated with Wear-Concepts to be competitive with almost anyone else in the surrounding area and closest States. We have used their services on direct fabrication of large diameter pipe assemblies and bends, as the differential between their costs for fabrication, and those from a local machine shop are minimal. Any difference is easily outweighed by the 'comfort-zone' that comes from having Wear-Con build and subsequently line (with tiles or other wear resistant material) their own fabrications.

If I can be of further service, or you wish to discuss the services offered by Wear-Con in greater detail, please contact me at the number listed at the top of the page (or via email).

Andy Sissons
Senior Plant Engineer
