Ceramic, Chrome Carbide, Epoxies, Silicone, UHMW, Urethane, Wear Plate and much more

**Product:** **Wear-Con WC700 Chrome Carbide Overlay Plate**  
**Industry:** Coal Fired Power Plant. Cement Kilns and Lime Kilns  
**Application:** Coal Chutes

During a recent case study at a Power Plant in Missouri, there was a severe wear problem on the head chute of the Main Coal Transfer System. The customer had previously used AR400 plate with a service life of 10 to 12 months. Wear-Con provided our WC700 Chrome Carbide Overlay Plate in the high impact and high-wear area with installation being in Feb 2000.

This installation was inspected again in early 2003 and the WC700 Chrome Carbide Overlay Plate was still in excellent condition. The liner has now been in service for three (3) years and should provide another 2 or 3 years of service. Needless to say, the customer is very pleased and has since purchased additional sheets of WC700 Wear Plate.

If you are interested in a quote fill in the appropriate blanks on the reverse side with your company name, and fax it back to our office at 816 587-2055 or you can simply give us a call at 816 587-1923.
